MARKET IMPACT

ANALYSIS LAYER

APPENDIX

A1 – SIGNAL DEFINITIONS (S1 – S7)

#	Signal Name	Data source	Trigger Condition	Signal Type
S1	CFO → capex acceleration	NSE/BSE cash flow statements	Capex/CFO ratio rising >15% YoY for 3+ consecutive quarters	Leading
S2	Gross Block Expansion	Balance Sheet, MCA Filings	Gross block growing >20% YoY, net debt within sector-normalised D/E ceiling	Leading
S3	Order Book Surge	Exchange disclosures, SEBI filings	Order-to-revenue ratio exceeds 1.5x; sector-adjusted for long-cycle industries	Leading
S4	WIP + CWIP jump	Balance Sheet, NSE/BSE Filings	Capital work-in-progress spike ≥2x prior 3-year average	Leading
S5	Management guidance tone	Earnings call transcripts, AR	NLP keyword frequency ("invest", "expand", "new plant", "capacity") up >30% YoY; sentiment >0.55	NLP leading
S6	Bulk deal & promoter action	NSE/BSE bulk deal data	Promoter net buying or large institutional accumulation (>0.5% stake in a quarter)	Leading
S7	Sector policy alignment	Govt budgets, RBI, PLI orders	Active PLI scheme, NIP project allocation, or RBI credit impulse supporting sector	Macro

APPENDIX

A2 – CONVICTION SCORE CALCULATION

Component	Source Layer	Weight	Contribution to 100
Quant signals	Layer 1 (S1–S7)	40%	max 40 pts
NLP / intent	Layer 4 (NLP)	25%	max 25 pts
Macro alignment	Layer 3 (macro)	20%	max 20 pts
Anomaly override	Layer 2 (financial)	15%	max 15 pts
Total	All 4 layers	100%	0–100 pts

HIGH CONVICTION (70-100)

Immediate alert · ~20–40 names/cycle

Watch List (40-69)

Re-screen in 90 days

Low Signal (0-39)

Auto-suppressed

A3 – FALSE POSITIVE DERIVATION

Layers active	FP rate	What this means	False alerts / 100	Contribution to 100
Layer 1 only (quant)	~42%	Nearly half of alerts are noise	42 in 100	Cyclical spikes, one-off asset sales, debt-funded capex
Layers 1 + 4 (+ NLP)	~22%	NLP halves residual noise	22 in 100	Mgmt tone confirms intent · removes tactical asset buy-outs
Layers 1 + 4 + 3 (+ macro)	~11%	Macro alignment halves again	11 in 100	Policy tailwind confirms sector capex is durable, not idiosyncratic
All 4 layers (+ anomaly)	<5%	Financial health gate eliminates distressed cos.	<5 in 100	D/E ≤4x, OCF positive, no SEBI scrutiny · only clean capex cycles pass

ALPHA CONTRIBUTION OF MACRO LAYER (S7 + LAYER 3)
+3–7%

Incremental annualised alpha vs quant-only · backtested over 3Y walk-forward.

NLP EARLY-WARNING ADVANTAGE
1–2 QUARTERS

NLP layer flags intent before formal financial disclosure appears in filings.
